TESTIMONIALS FROM HEALTH PROFESSIONALS

"I think learning practical ways to incorporate nutrition findings into our assessments, effective ways to educate on lifestyle behaviors in brief interactions and opportunities for nutrition-related referrals and collaboration would benefit most of us."

-Practicing Physical Therapist

"It would also be helpful to explore my scope in the realm of nutrition as a pediatric feeding specialist (and cross-compared to a pediatrician), knowing that while I am not a dietitian, my role directly impacts and is impacted by nutrition."

-Practicing speech-language pathologist, specializing in pediatric feeding difficulties

"Literature indicates that important nutrition-focused competencies for physicians include clinical practice, health promotion/disease prevention, communication and working as a team."
